Configuring the audit client for NFS

The audit share is automatically enabled as a read-only share.

What you'll need

- You must have the `Passwords.txt` file with the root/admin password (available in the SAID package).
- You must have the `Configuration.txt` file (available in the SAID package).
- The audit client must be using NFS Version 3 (NFSv3).

About this task

Perform this procedure for each Admin Node in a StorageGRID deployment from which you want to retrieve audit messages.

Steps

1. Log in to the primary Admin Node:

- a. Enter the following command: `ssh admin@primary_Admin_Node_IP`
- b. Enter the password listed in the `Passwords.txt` file.
- c. Enter the following command to switch to root: `su -`
- d. Enter the password listed in the `Passwords.txt` file.

When you are logged in as root, the prompt changes from `$` to `#`.

2. Confirm that all services have a state of Running or Verified. Enter: `storagegrid-status`

If any services are not listed as Running or Verified, resolve issues before continuing.

3. Return to the command line. Press **Ctrl+C**.

4. Start the NFS configuration utility. Enter: `config_nfs.rb`

Shares	Clients	Config	

add-audit-share	add-ip-to-share	validate-config	
enable-disable-share	remove-ip-from-share	refresh-config	
		help	
		exit	

5. Add the audit client: `add-audit-share`

- a. When prompted, enter the audit client's IP address or IP address range for the audit share:
`client_IP_address`
- b. When prompted, press **Enter**.

6. If more than one audit client is permitted to access the audit share, add the IP address of the additional user: `add-ip-to-share`

- a. Enter the number of the audit share: `audit_share_number`
- b. When prompted, enter the audit client's IP address or IP address range for the audit share:
`client_IP_address`
- c. When prompted, press **Enter**.

The NFS configuration utility is displayed.

- d. Repeat these substeps for each additional audit client that has access to the audit share.
7. Optionally, verify your configuration.

- a. Enter the following: `validate-config`

The services are checked and displayed.

- b. When prompted, press **Enter**.

The NFS configuration utility is displayed.

- c. Close the NFS configuration utility: `exit`

8. Determine if you must enable audit shares at other sites.

- If the StorageGRID deployment is a single site, go to the next step.
- If the StorageGRID deployment includes Admin Nodes at other sites, enable these audit shares as required:

- a. Remotely log in to the site's Admin Node:

- i. Enter the following command: `ssh admin@grid_node_IP`
- ii. Enter the password listed in the `Passwords.txt` file.
- iii. Enter the following command to switch to root: `su -`
- iv. Enter the password listed in the `Passwords.txt` file.

- b. Repeat these steps to configure the audit shares for each additional Admin Node.

- c. Close the remote secure shell login to the remote Admin Node. Enter: `exit`

9. Log out of the command shell: `exit`

NFS audit clients are granted access to an audit share based on their IP address. Grant access to the audit share to a new NFS audit client by adding its IP address to the share, or remove an existing audit client by removing its IP address.

Adding an NFS audit client to an audit share

NFS audit clients are granted access to an audit share based on their IP address. Grant access to the audit share to a new NFS audit client by adding its IP address to the audit share.

What you'll need

- You must have the `Passwords.txt` file with the root/admin account password (available in the SAID package).

- You must have the `Configuration.txt` file (available in the SAID package).
- The audit client must be using NFS Version 3 (NFSv3).

Steps

1. Log in to the primary Admin Node:

- Enter the following command: `ssh admin@primary_Admin_Node_IP`
- Enter the password listed in the `Passwords.txt` file.
- Enter the following command to switch to root: `su -`
- Enter the password listed in the `Passwords.txt` file.

When you are logged in as root, the prompt changes from `$` to `#`.

2. Start the NFS configuration utility: `config_nfs.rb`

Shares	Clients	Config	

add-audit-share	add-ip-to-share	validate-config	
enable-disable-share	remove-ip-from-share	refresh-config	
		help	
		exit	

3. Enter: `add-ip-to-share`

A list of NFS audit shares enabled on the Admin Node is displayed. The audit share is listed as:
`/var/local/audit/export`

4. Enter the number of the audit share: `audit_share_number`

5. When prompted, enter the audit client's IP address or IP address range for the audit share: `client_IP_address`

The audit client is added to the audit share.

6. When prompted, press **Enter**.

The NFS configuration utility is displayed.

7. Repeat the steps for each audit client that should be added to the audit share.

8. Optionally, verify your configuration: `validate-config`

The services are checked and displayed.

- When prompted, press **Enter**.

The NFS configuration utility is displayed.

9. Close the NFS configuration utility: `exit`
10. If the StorageGRID deployment is a single site, go to the next step.

Otherwise, if the StorageGRID deployment includes Admin Nodes at other sites, optionally enable these audit shares as required:

- a. Remotely log in to a site's Admin Node:
 - i. Enter the following command: `ssh admin@grid_node_IP`
 - ii. Enter the password listed in the `Passwords.txt` file.
 - iii. Enter the following command to switch to root: `su -`
 - iv. Enter the password listed in the `Passwords.txt` file.
- b. Repeat these steps to configure the audit shares for each Admin Node.
- c. Close the remote secure shell login to the remote Admin Node: `exit`

11. Log out of the command shell: `exit`

Verifying NFS audit integration

After you configure an audit share and add an NFS audit client, you can mount the audit client share and verify that the files are available from the audit share.

Steps

1. Verify connectivity (or variant for the client system) using the client-side IP address of the Admin Node hosting the AMS service. Enter: `ping IP_address`

Verify that the server responds, indicating connectivity.

2. Mount the audit read-only share using a command appropriate to the client operating system. A sample Linux command is (enter on one line):

```
mount -t nfs -o hard,intr Admin_Node_IP_address:/var/local/audit/export  
myAudit
```

Use the IP address of the Admin Node hosting the AMS service and the predefined share name for the audit system. The mount point can be any name selected by the client (for example, *myAudit* in the previous command).

3. Verify that the files are available from the audit share. Enter: `ls myAudit /*`

where *myAudit* is the mount point of the audit share. There should be at least one log file listed.

Removing an NFS audit client from the audit share

NFS audit clients are granted access to an audit share based on their IP address. You can remove an existing audit client by removing its IP address.

What you'll need

- You must have the `Passwords.txt` file with the root/admin account password (available in the SAID package).
- You must have the `Configuration.txt` file (available in the SAID package).

About this task

You cannot remove the last IP address permitted to access the audit share.

Steps

1. Log in to the primary Admin Node:

- a. Enter the following command: `ssh admin@primary_Admin_Node_IP`
- b. Enter the password listed in the `Passwords.txt` file.
- c. Enter the following command to switch to root: `su -`
- d. Enter the password listed in the `Passwords.txt` file.

When you are logged in as root, the prompt changes from `$` to `#`.

2. Start the NFS configuration utility: `config_nfs.rb`

```

-----
| Shares                | Clients                | Config                |
-----
| add-audit-share       | add-ip-to-share       | validate-config      |
| enable-disable-share  | remove-ip-from-share  | refresh-config       |
|                       |                       | help                 |
|                       |                       | exit                 |
-----

```

3. Remove the IP address from the audit share: `remove-ip-from-share`

A numbered list of audit shares configured on the server is displayed. The audit share is listed as:
`/var/local/audit/export`

4. Enter the number corresponding to the audit share: `audit_share_number`

A numbered list of IP addresses permitted to access the audit share is displayed.

5. Enter the number corresponding to the IP address you want to remove.

The audit share is updated, and access is no longer permitted from any audit client with this IP address.

6. When prompted, press **Enter**.

The NFS configuration utility is displayed.

7. Close the NFS configuration utility: `exit`

8. If your StorageGRID deployment is a multiple data center site deployment with additional Admin Nodes at the other sites, disable these audit shares as required:

- a. Remotely log in to each site's Admin Node:
 - i. Enter the following command: `ssh admin@grid_node_IP`
 - ii. Enter the password listed in the `Passwords.txt` file.
 - iii. Enter the following command to switch to root: `su -`
 - iv. Enter the password listed in the `Passwords.txt` file.
 - b. Repeat these steps to configure the audit shares for each additional Admin Node.
 - c. Close the remote secure shell login to the remote Admin Node: `exit`
9. Log out of the command shell: `exit`

Changing the IP address of an NFS audit client

1. Add a new IP address to an existing NFS audit share.
2. Remove the original IP address.
